

Minimoog service manual errata

Figure 9-17 (Interconnecting Wiring Diagram)

No osc modulation switch included in drawing

"Actave" Adj instead of Octave Adj on Board No. 1

Error on decay switch (LHC) schematic showing pin 10 going to pin 2 of switch.

Pin 10 actually goes to pin 3 of switch.

See diagram.

Figure 9-7 (Contour Generator and Keyboard No. 2 Schematic Diagram)

PL-1 / SO-4 connections for board 2 indicate pin 9. Should be pin 1.

PL-1 / SO-4 connections for board 2 indicate Pin 5 not used.

In earlier models it's tied to pin 6.

Changes regarding oscillator range switches.

1st edition: 10 ohm resistors, no current loop resistor, no buffer board, old VCOs

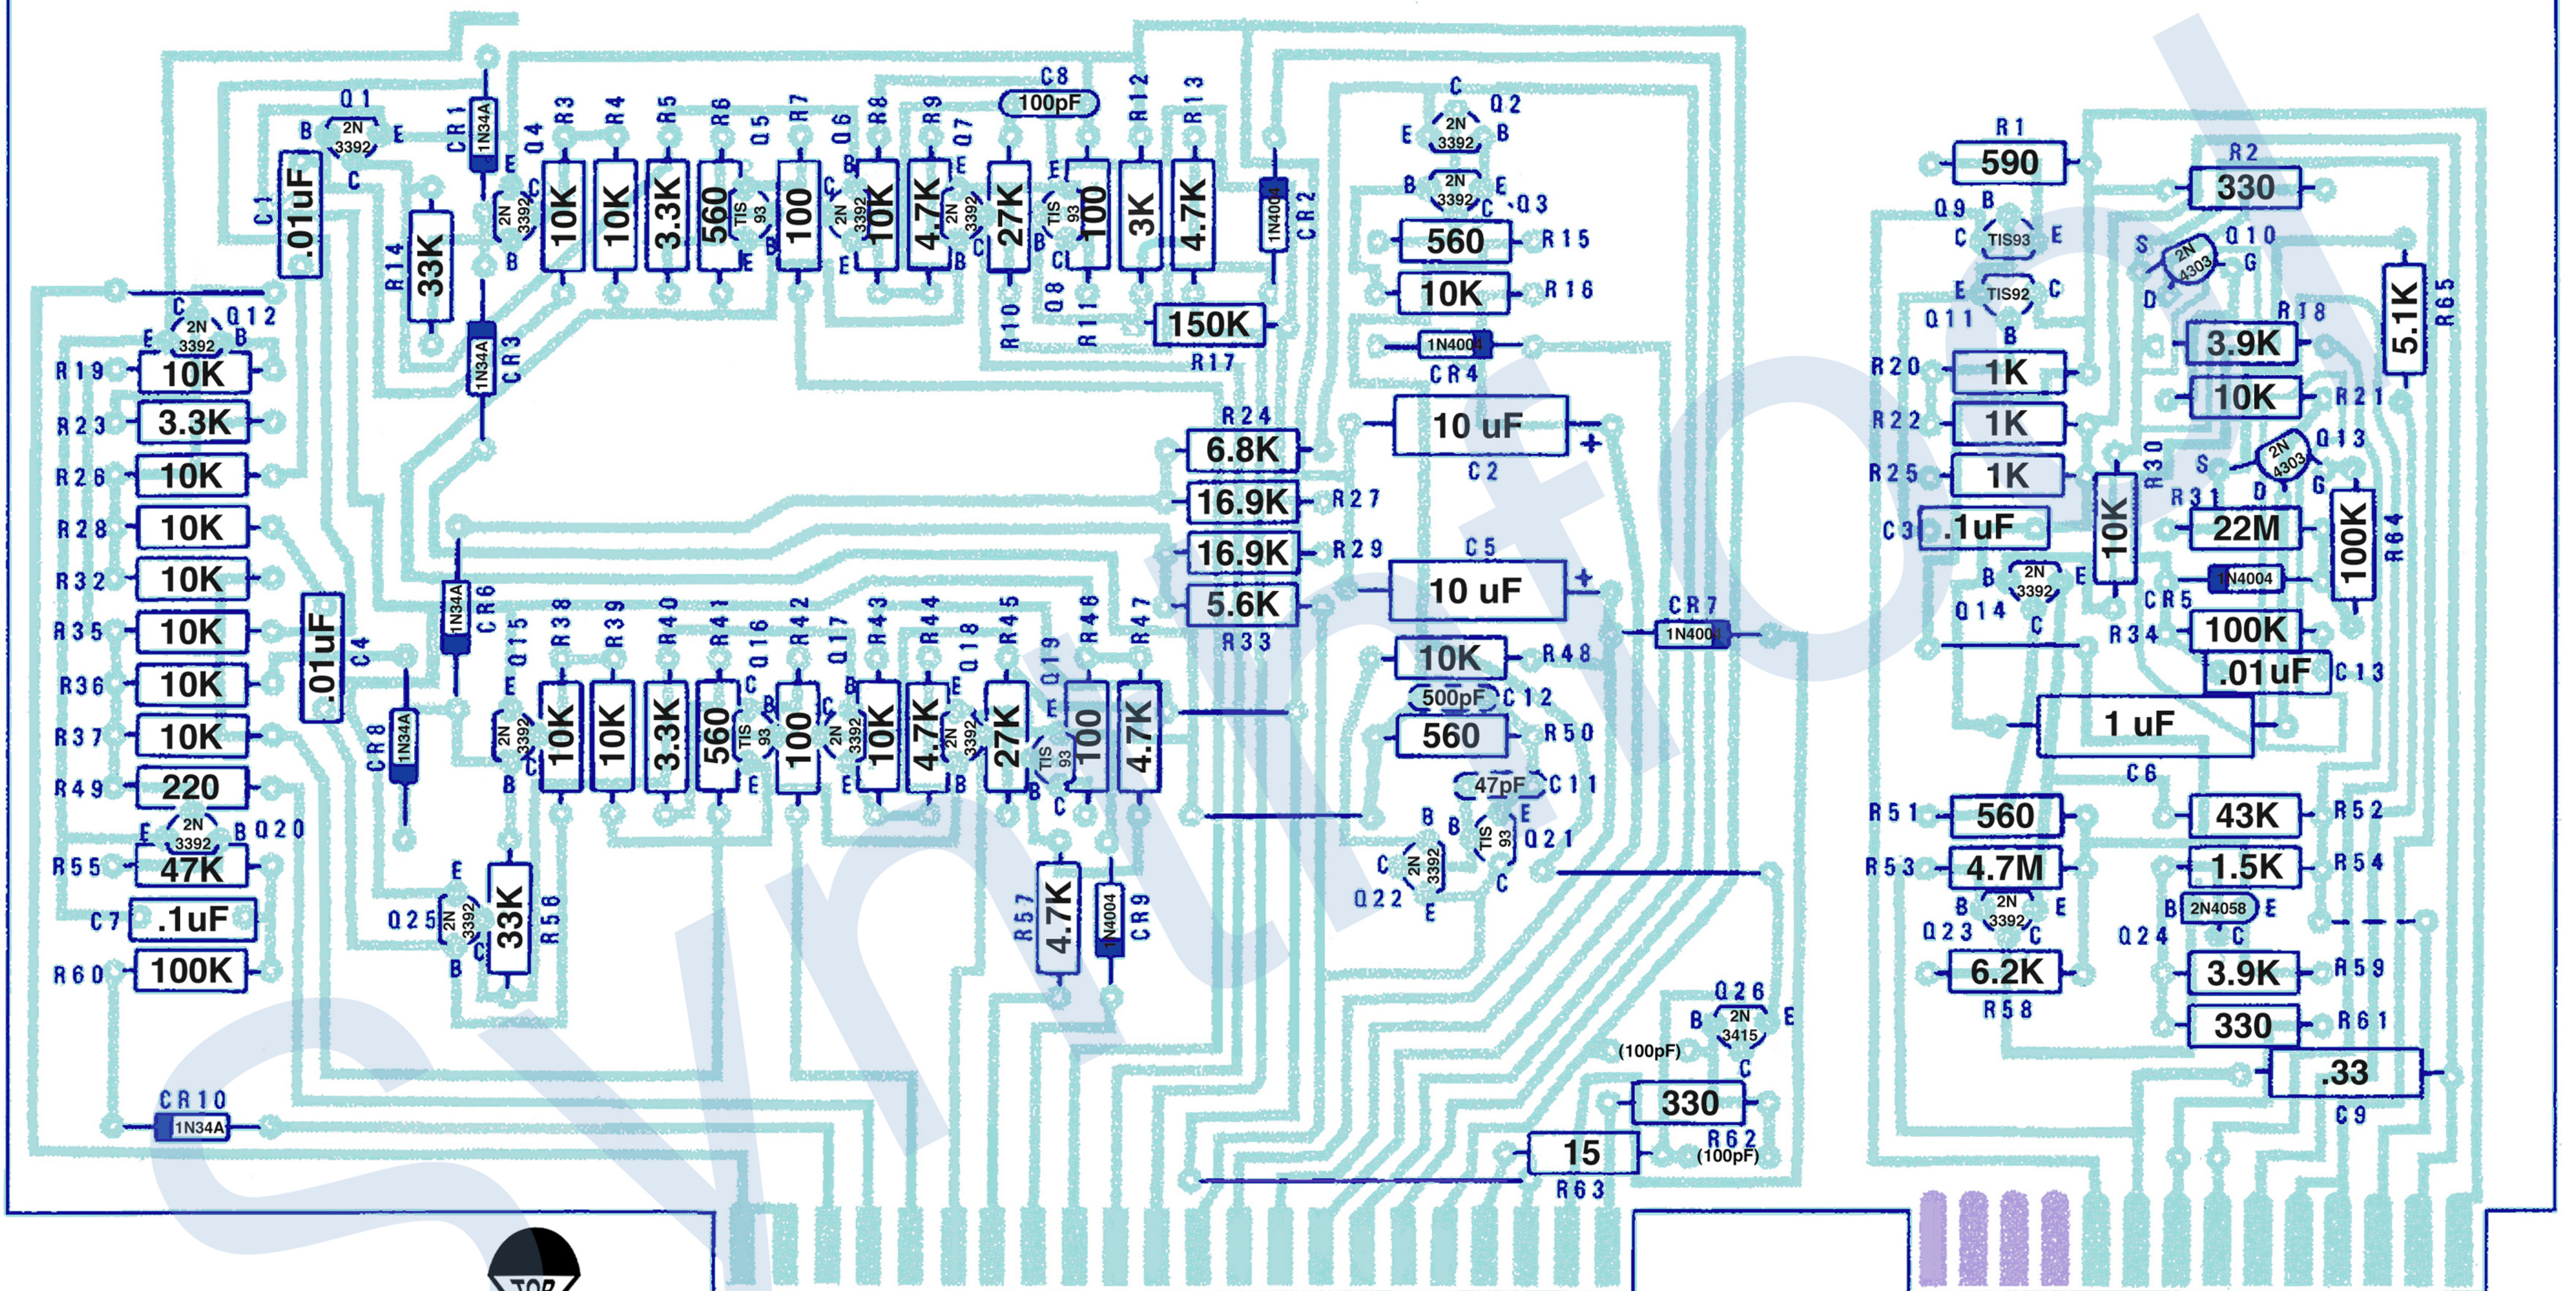

2nd edition: 1K ohm resistors, 90.9 ohm current loop resistor, no buffer board, old VCOs

3rd edition: 1K ohm resistors, 90.9 ohm current loop resistor, buffer board, old VCOs

4th edition: 1K ohm resistors, no current loop resistor, buffer board, new VCOs

Rectifier board

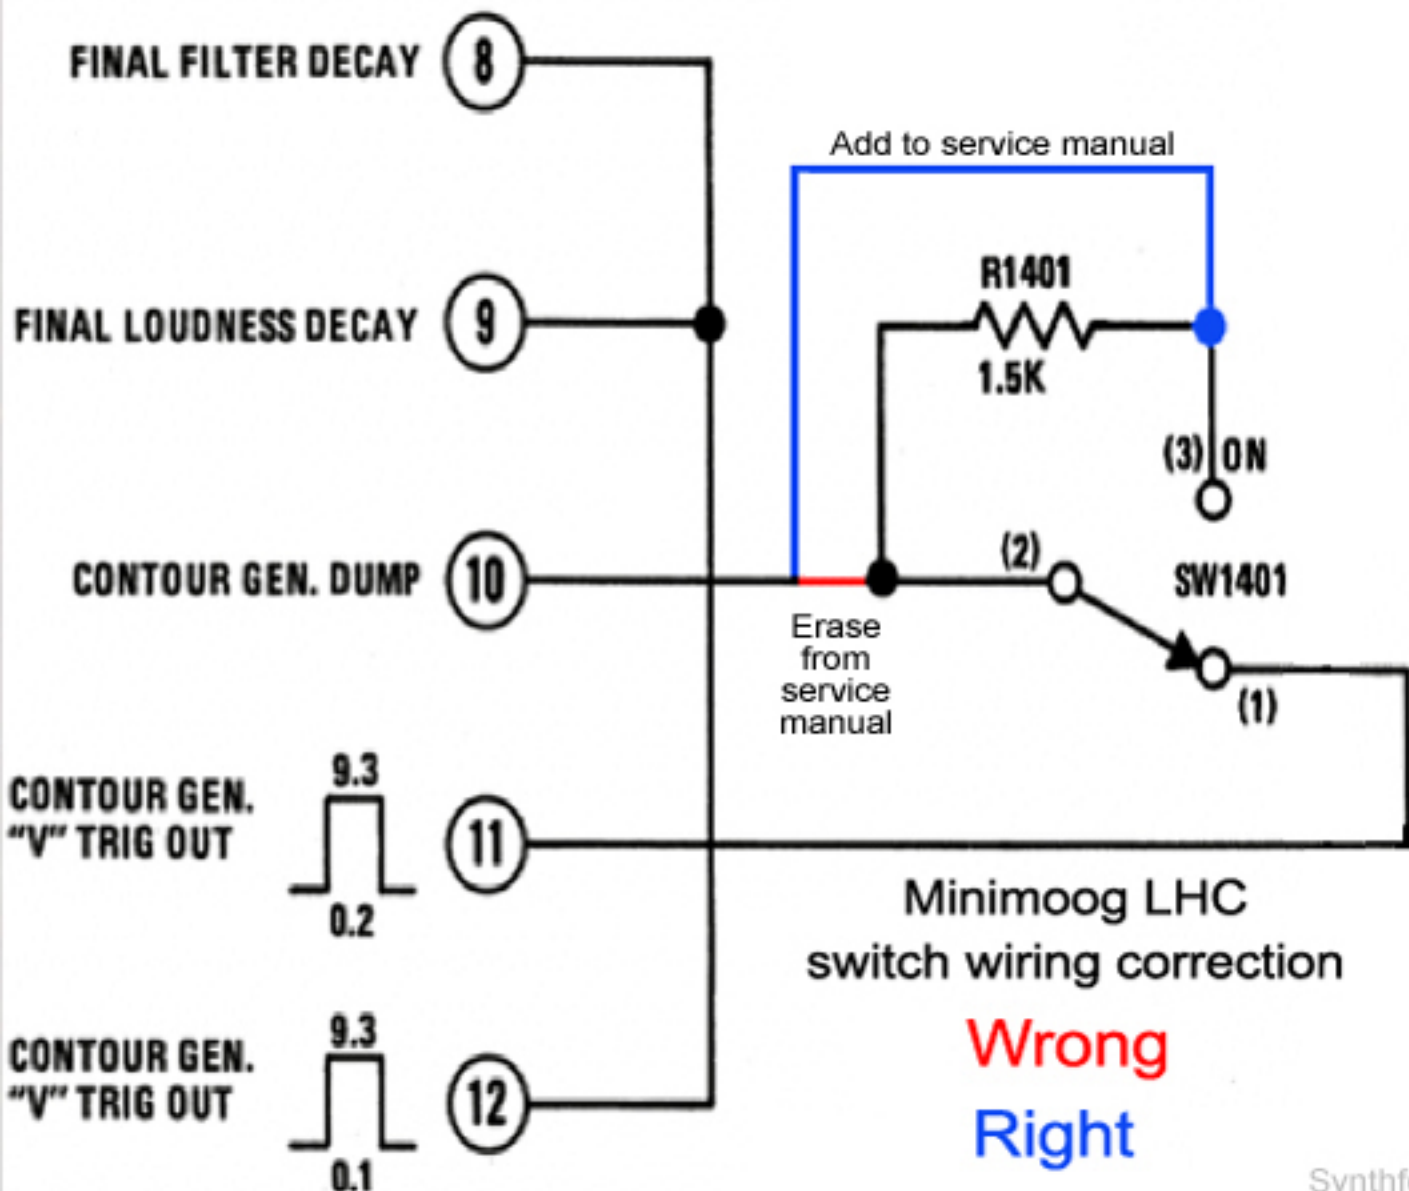

Capacitor C1 and C2 labels swapped on some rectifier board pictorial / parts placements.

TIS92/93, GES92/93, 135GE, 595-1G225 C B E
 2N3904, 2N3906 E B C
 2N3392, 2N3415, 2N4058 E C B

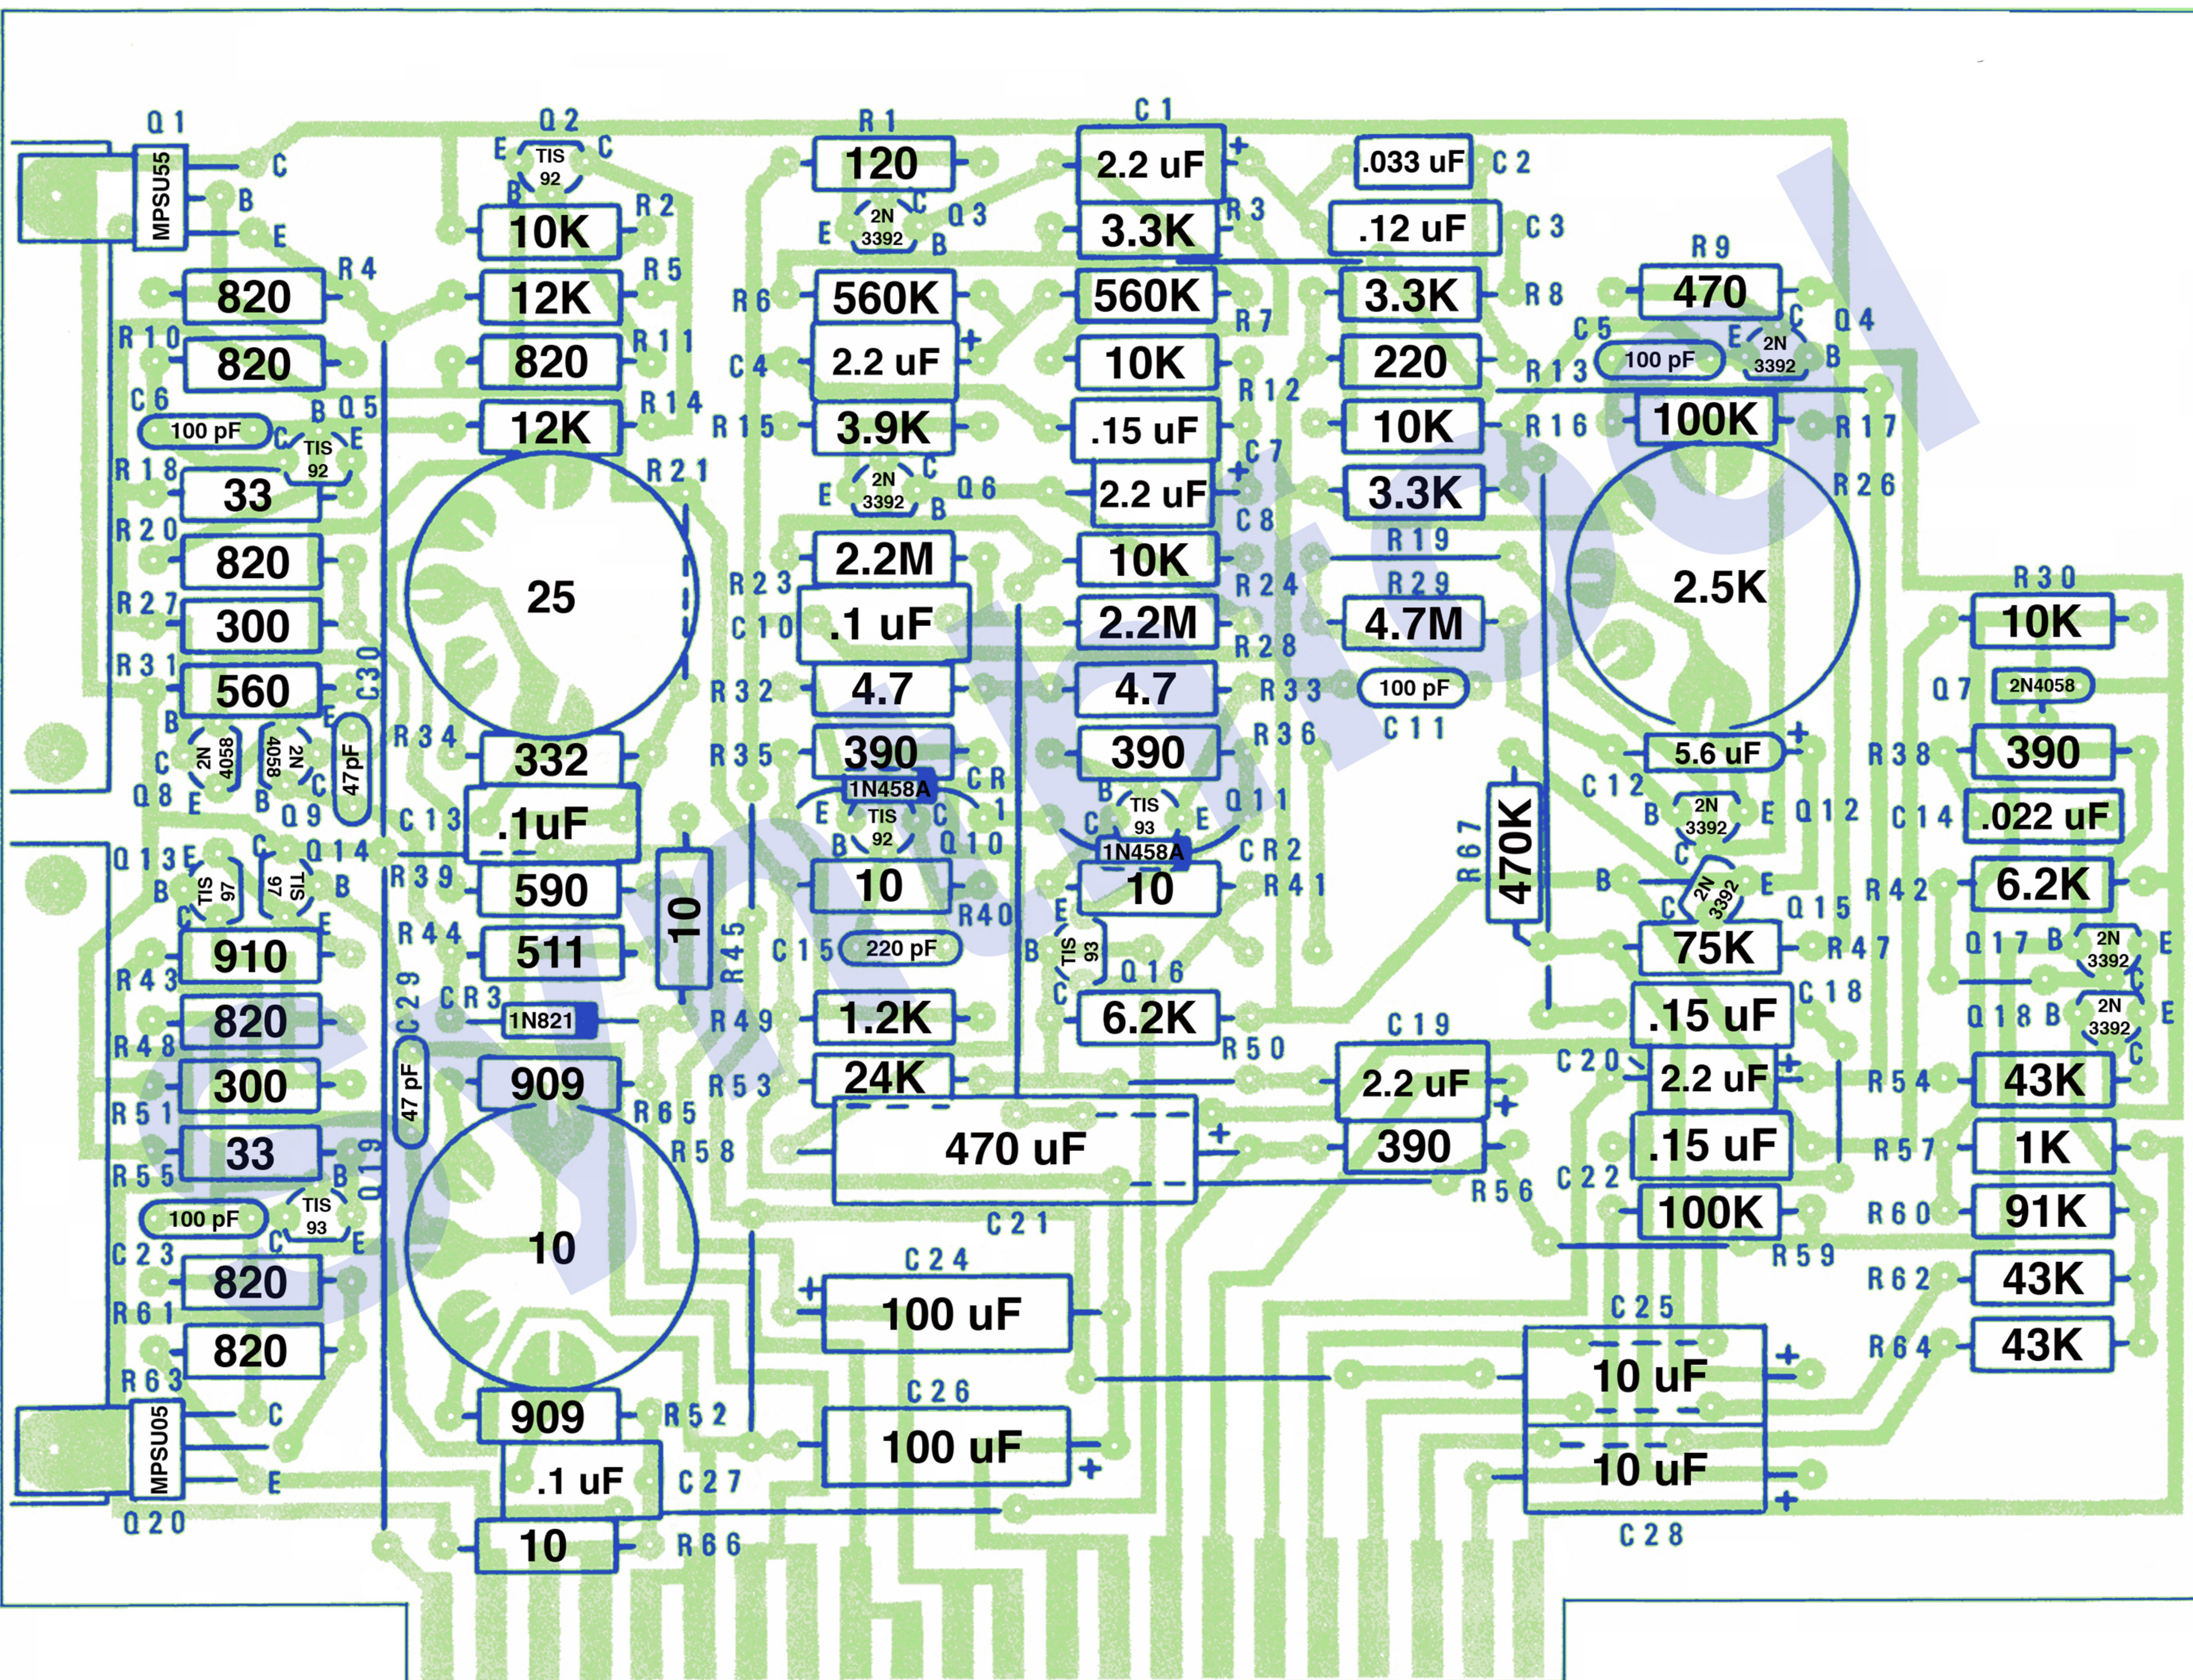

R34 IS 5.1K ON EARLY UNITS. REPLACE WITH 100K AND ADD C13.
 R64, R65 AND C13 NOT PRESENT ON EARLIER UNITS. ADD ALL.
 C8 NOT PRESENT ON SOME EARLY UNITS. ADD 100PF.
 100PF CAPS ADDED ON SOME UNITS NEAR R62 AND R63.
 C11 AND C12 ADDED ON SOME UNITS NEAR R50 AND Q21.
 R62 IS 100 OHMS ON VERY EARLY UNITS

TO FIX VCF ENV ATTACK UNDERSHOOT, REPLACE R13 WITH SELECTED
 RESISTOR (~3.7K) OR REPLACE R12 WITH 25K TRIMMER
 TO ADD ADJUSTABLE KEY CURRENT (SCALING), REPLACE R1 WITH
 560 OHM 1% AND 50 OHM CERMET TRIMMER IN SERIES.
 IF GLIDE TIMES UP AND DOWN ARE NOT EQUAL, SELECT R59 VALUE
 TO INCREASE GLIDE TIME TO 10 SECS MAX, REPLACE C6 WITH 3.9UF

R39 Changed to 511 ohms on later units

Change R34 to 300 ohms if installing
a 20 ohm multiturn for R21

C13 incorrectly marked as .01uf in schematics

R44 shown twice in schematics

R41 (misabeled as R44) is 10 ohm near Q16

Change R60 for variable modulation depth

Later boards (shown) have noise circuitry changes.
Old boards will have R19 as 6.8megs and other changes
around R67.
